## 6. Summary of Current Actions

### Goals and Objectives for 29 April 2012 WAN

1. Identify repeaters available for use by District 14 ARES Units that are capable of providing effective county wide and beyond communications.
2. Promote greater association to strengthen the spirit of cooperation between all four District 14 ARES Units, adjacent counties and counties within the reach of local repeater coverage zones. All ECs are encouraged to aggressively promote the participation of as many members and non-members as possible.
3. Use ICS templates for planning, execution and documentation as directed by the District 14 ARES Plan.

### WAN Operational Information

The WAN will begin at 1900 Local. You may check in to as many nets as possible.

Please review the sample WAN script on page 8 prior to the WAN in order to have a clear understanding of the sequence and how the WAN will operate.

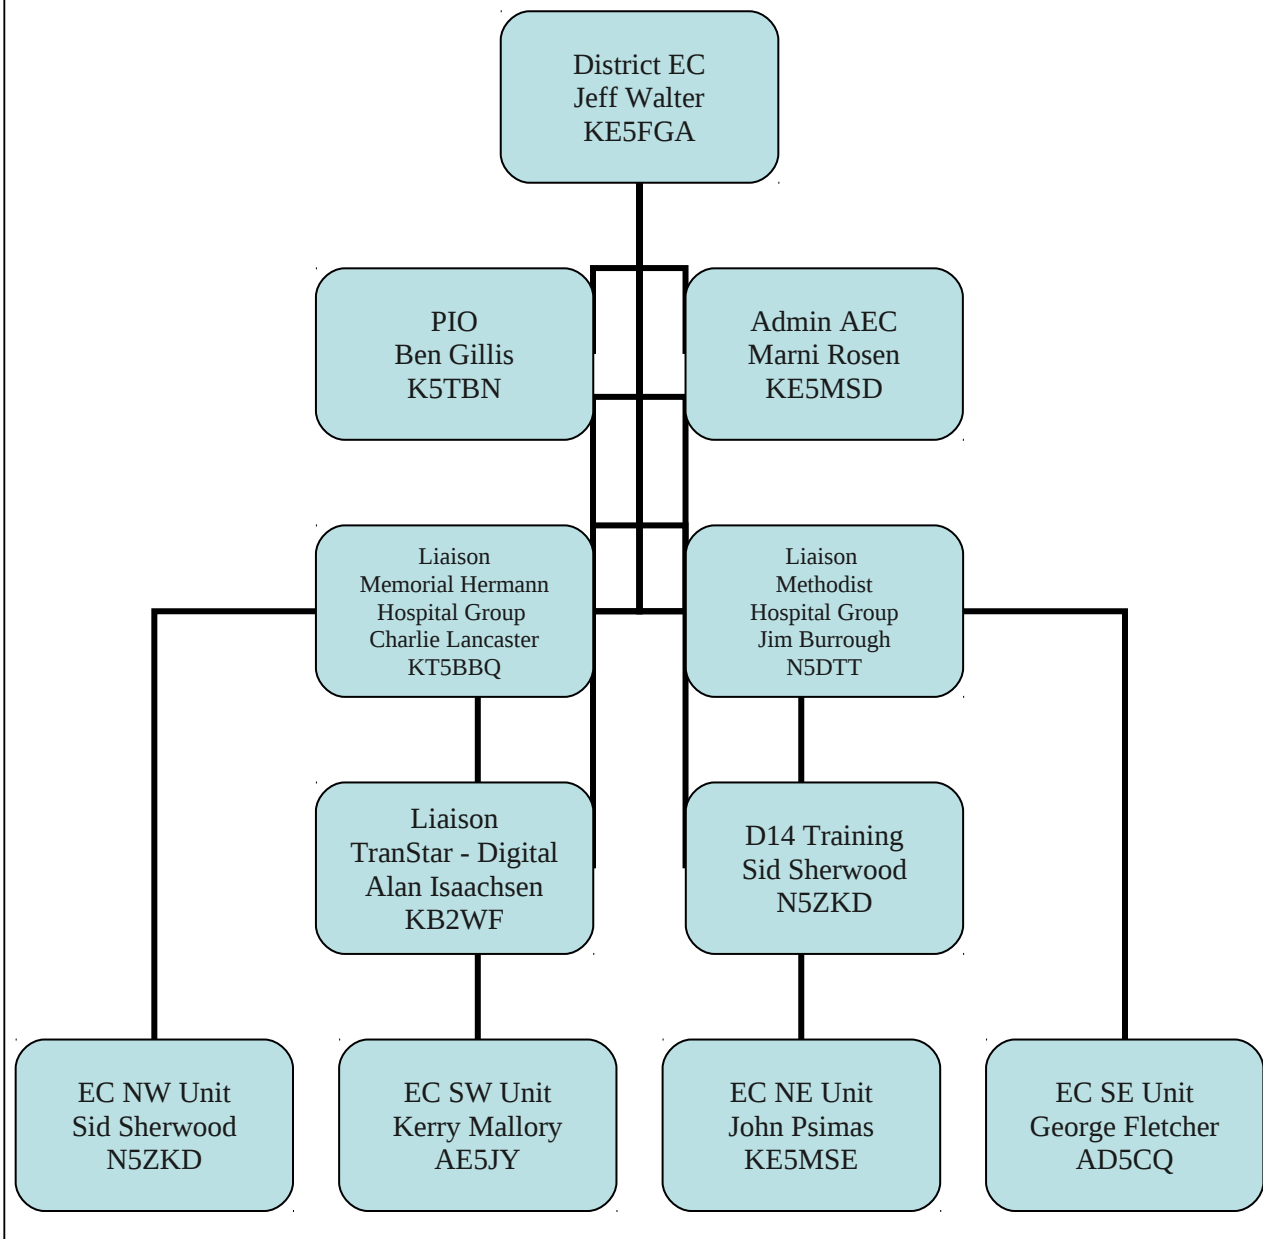

## 6. Summary of Current Actions

1. Unit ECs are requested to announce the WAN on their regular Unit NETS and request all members to participate. Additionally, other means of announcement, such as phone trees, email lists or other means are strongly encouraged.
2. All net control and back up net control stations should be identified before the initial WAN ICS documentation is released to the unit members. All net control and backup net controls are requested to perform net control duty for a local net prior to the WAN.
3. All repeaters trustees have been notified and requested permission for use.

### SAFETY

Safety is paramount. Always think safety on all ARES operations. Be conscious of the conditions around you on all deployments. Be aware of your situation and surroundings at home and while deployed. If deployed to a hazardous location use the buddy system and make certain that someone knows where you are.

## ICS Form 213

### District 14 ARES® Wide Area Net

(Revised 26 Oct 2010)

#### NET PREAMBLE **TEMPLATE**

CQ.....CQ.....CQ.....

This is <KE5FGA> **Kilo Echo 5 Foxtrot Golf Alpha**, primary net control station for tonight's net. My name is Jeff, located I-10 Mason Road in far West Harris County. Is tonight's backup net control station on frequency and what is your location?

Tonight, we are using the 147.000 repeater, with the permission of the repeater trustee KR5K. This repeater requires a sub-audible tone of 103.5 Hertz for access, with a Positive offset. If your transmitter does not have this tone, please transmit simplex on the repeater output frequency.

This net is open to all amateurs in the surrounding community. This net is not limited to ARES members. ARES, CERT, MARS, RACES, REACT, no affiliation, Where ever you may be located within the sound of my voice, all are welcome and encouraged to check in.

For information on becoming an ARES member, please contact the EC for your local county unit. Please send radio packet check-ins to [KE5FGA@Winlink.org](mailto:KE5FGA@Winlink.org) using the list on page 5 of this plan.

This is a directed net; all stations are requested to remain on frequency until recognized and location identified by net control. You are encouraged to check into as many nets as possible. Please refer to page 5 of the EAP for a listing of all nets. If you are located at a served agency, please state the agency name.

The first objective of these nets is to identify repeaters available for use by District 14 ARES Units that are capable of providing effective POD communications. We also will answer any questions on how our Simulated Emergency Test will be conducted next Saturday.

- When requesting check-ins to the net acknowledge the call signs you hear before asking for more stations.
- Call each station that checked in with traffic, in the order they checked in, asking each one: Their name and location.
- Record their information on the Unit Log (Page 10 of the EAP)
- When completed with the initial list of check-ins, request if there are any relays for the wide area net.

## Begin Net Check-In Process

**Do we have any stations that wish to check in that have priority or emergency traffic for the net? Please call now using ITU phonetics.**

**We will now take check-ins from stations with all call sign suffixes beginning: A-Alpha through Z-Zulu**

Acknowledge the call signs you hear before asking for more stations, continue when no one answers

**Call each station in the order they checked in, asking each one:**

Their name and general location. If at a served agency, that information.

**Continue calling for additional check-ins and recording their information Call sign and first name until the net closes at 8:00 PM local time.**

Is there any further business for tonight's net?

This is KE5FGA now closing the Wide Area Information Net. We want to thank the Cypress Repeater Group, Trustee KR5K, and the other users of this frequency for giving us a clear frequency to conduct this net. This repeater and frequency are now available for normal amateur operations.

This is KE5FGA clear.

Compile list and NCS and Backup NCS should compare and confirm information.

Number of check-ins: \_\_\_\_\_

Total time of the net: \_\_\_\_\_

# Pieces traffic passed: \_\_\_\_\_

Documented information for every check in:

Name/Call

City - County location they are located at.

Send The Unit Log (ICS-214) to Jeff Walter - KE5FGA@ARRL.NET before securing site.
